

Before you run your first query, you need to set up a query result location in Amazon S3.

Athena now supports typeahead code suggestions to speed up SQL query development. Typeahead suggestions are turned on by default. You can change this setting in query editor preferences.

Announcing new optimization features for Apache Iceberg tables

Optimize storage for Apache Iceberg tables with automatic snapshot retention and orphan file deletion. Learn more

Databases (1/3)

A database is a set of associated table definitions, organized into a logical group.

A crawler connects to a data store, progresses through a prioritized list of classifiers to determine the schema for your data, and then creates metadata tables in your data catalog.

Crawlers (1/23)

View and manage all available crawlers.
